

ProMinent® Packaged Plant Winery Waste pH Correction Systems

ProMinent®

Series 3200X ProMinent pH Correction System installed at a winery in the Hunter Valley, NSW. The system treats waste from the winemaking facility allowing it to be pumped back onto the land for reuse.

Why install a pH Correction System ?

Waste generated from wine making facilities will be acidic or alkaline depending on the stage of the wine making process. EPA legislation requires this waste be within permissible pH limits prior to discharge to drain or onto the land. A pH correction system is therefore necessary to ensure the pH of the discharged waste is within these limits.

How can ProMinent help ?

- For over 25 years, ProMinent has been a major supplier of pH correction systems for wineries and other industries throughout Australia.
- We can come to you to discuss your individual requirements.
- We can design, manufacture and install a pH correction system to meet your individual requirements.
- We have trained installation and service personnel available if required.

On 15th October 2001 ProMinent celebrated 25 years of service in Australia
